

Ball-in-Court Task Manager

A modern task management app to track whose court the ball is in.

Files Needed

Your app consists of just **2 files**:

1. **index.html** - Main HTML file
2. **app.js** - Application logic

Quick Start - GitHub Pages Deployment

Step 1: Save the Files

1. Copy the code from `index.html` artifact
2. Save it as `index.html` on your computer
3. Copy the code from `app.js` artifact
4. Save it as `app.js` in the **same folder** as index.html

Step 2: Create GitHub Repository

1. Go to <https://github.com> and sign in (or create account)
2. Click the green **"New"** button
3. Name your repository: `ball-in-court`
4. Make it **Public**
5. Check "Add a README file"
6. Click **Create repository**

Step 3: Upload Files

1. In your repository, click **Add file** → **Upload files**
2. Drag and drop BOTH `index.html` and `app.js`
3. Scroll down and click **Commit changes**

Step 4: Enable GitHub Pages

1. Go to **Settings** (top menu)
2. Click **Pages** (left sidebar)
3. Under "Source":

- Branch: Select **main**
- Folder: Select / **(root)**

4. Click **Save**

5. Wait 1-2 minutes

Step 5: Access Your App

Your app will be live at:

<https://yourusername.github.io/ball-in-court/>

Add to Mobile Home Screen

iPhone:

1. Open the URL in Safari
2. Tap Share button
3. Tap "Add to Home Screen"
4. Tap "Add"

Android:

1. Open the URL in Chrome
2. Tap three dots menu
3. Tap "Add to Home screen"
4. Tap "Add"

Features

-  Track all active tasks
-  View top 1 or top 5 priorities
-  Bubble up tasks (handed off in last 3 days)
-  Stale tasks (7+ days overdue)
-  Completed tasks archive
-  Contact management
-  Email notifications
-  Export/Import data for backup

-  Mobile-friendly design

Data Storage

All data is stored locally in your browser using localStorage. To sync between devices:

1. Click Settings → Export Tasks & Contacts
2. Save the JSON file
3. On other device: Settings → Import Tasks & Contacts

Troubleshooting

App not loading?

- Make sure both `index.html` and `app.js` are in the same folder
- Check that files are named exactly: `index.html` and `app.js` (case-sensitive)
- Wait 2-3 minutes after enabling GitHub Pages

Need to update the app?

- Go to your GitHub repository
- Click on the file you want to edit
- Click the pencil icon (Edit)
- Make changes
- Scroll down and click "Commit changes"
- Wait 1-2 minutes for changes to deploy

Support

For issues or questions, create an issue on the GitHub repository.
